### REASONS FOR ALLOWANCE

Claims 1-9, 22, 24, and 26-36 are allowed. The following is an examiner's statement of reasons for allowance: Applicant has amended independent claims 1, 22, 24, and 26 to recite, *inter alia*, the following limitation:

a reading unit operable to read the information through said reading channel, the information (i) indicating a physical address of said signal switching device, the physical address of said signal switching device being generated by the output destination device and including information indicating a physical address of the output destination device, and (ii) indicating a status of the output destination device.

The combined teachings of Oda, Osakabe, and Kogane as applied in the previous Office Action and when considered as a whole teach a device substantially similar to the recited signal switching device, but do not explicitly teach the amended limitation that the physical address of said switching device is generated by the output destination device. Kogane teaches a system wherein a control server (Fig. 2, element 5) assigns a physical address to a plurality of input devices and a display terminal (see, e.g., [0047]) but does not disclose that the physical address of the switching device (control server 5) is generated by the display terminal 4.

In an analogous art, Iwamura (US Pat. No. 5,883,621) teaches a system wherein a master device (IRD) assigns physical addresses to sources of content (e.g., DVD player, MD player, DVCR1, DVCR2, etc.) and forwards the content provided by said content sources to a display device. In the context of the instant application, the IRD of Iwamura could reasonably be seen as equivalent to the recited output destination device, as Iwamura's IRD assigns physical addresses to input devices connected to it and forwards a received audio/video signal to a television without exchanging control

Art Unit: 2425

information with said television. However, such an interpretation of Iwamura then requires the individual input devices taught by Fig. 6 to be considered to be equivalent to the recited switching device which is a faulty comparison since the claims explicitly recite that said switching device is, "*operable to select a video signal from a plurality of video signal inputs, each video signal input being transmitted from an input source device of a plurality of input source devices.*" Clearly, an interpretation of Iwamura in which the IRD is considered equivalent to the recited output destination device fails to meet this limitation since the devices connected to said IRD are not themselves each connected to a plurality of input devices.

An alternate reading of Iwamura in which the IRD is considered equivalent to the recited switching device fails to meet the claimed limitations for the same reasons as the previous rejection based on Oda in view of Kogane and Osakabe since Iwamura's IRD is not assigned a physical address by the television.

The art previously cited by the Examiner fails to teach the amended limitation that the physical address of said switching device is generated by the output destination device. Though Iwamura arguably teaches a system in which the output destination device assigns a physical address to its input devices, such an interpretation of Iwamura fails to teach the recited signal switching device. Further, one of ordinary skill in the art at the time of the invention would not have found it obvious to modify the system of Oda in view of Osakabe and Kogane so that said physical address was assigned by the output destination device; in light of the previously cited art, such a modification would have been counter-intuitive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
